Dear Sir,
Reference to your earlier letter regarding decisions (X/7 - X/8 - X/11) please be informed of the following :

Decision (X/7): Halon Management Strategy:

Before 1994 the State of Kuwait was depending in the various types of fire extinguishing systems on Halon 1211-or Halon 1301 - The National Ozone Committee (NOC) took initiative steps to reduce the total consumption of halon across the county . Arranging meetings with importers and end users to inform them about the rules & regulations regarding the highest substances that have the potential to deplete the Ozone Layer. The import of Halon was gradually band in the country unless for essential uses such as the Army & Air crafts. This does not mean that there is a quota system for Holon, It only means that World wide nothing was done regarding the halon systems in Air craft and in Army. As a member of the committee the Public department Of Fire Fighting took the upper hand in dealing with all the studies regarding the Halons and its alternatives and controlling there imports to the country. A detailed information will be included in the country program .

Decision X/8:New substances with ozone depleting Potential :

Regarding the consumption of the country for Bromochloromethane the (NOC) have requested the Chemical department in the Environment public Authority to list all the importers and end users for the mentioned chemical - There was no positive input till the date.
